

GARBAGE DISPOSAL UNIT

It is a revolutionary cost effective alternative to expensive and unsightly solid waste management systems. All you need a tractor and we give you an indigenously produced Hydraulically Operated Garbage collection and Disposal mechanism. we have supplied our garbage disposal system to nearly 20 municipalities / organizations of the country.

OPERATIONS:

1. A container is kept collection point. Waist high (950)mm dumping ensures ease of filling and minimize spillage.
2. Tractor attached carrier is backed on to the container, the control mechanism mounted on tractor brings the powerful hydraulic arms into action.
3. The container is raised & saddles the carrier firmly for transportation to dumping site.
4. One push at control valve discharges the garbage.

CONTAINER:

- Capacity 5M3
- Specially coated rust resistant construction
- Four opening lids-two on each side.
- Container can also be filled through rear door(wheel barrow can be unloaded)
